PRIORITY ACTIVATOR CONSULTING

PRIORITY ACTIVATOR CONSULTING

CULTURE DYNAMICS PROFILE · TESTING GUIDE

Culture Dynamics Profile: rehearsal guide

Step by step: test the whole platform as every role, from a new client to the next cycle, then walk two prepared clients.

Reference	PAC/CDP/GUIDE/001
Date	20 October 2026 (third edition)
Scope	A step by step guide for PAC managers to test the whole platform themselves, from a new client with nothing in it to the next cycle, as every role, before a real client does
Prepared for	PAC managers testing the platform
Classification	Proprietary and Confidential: Priority Activator Consulting

Document control

Document	Culture Dynamics Profile: rehearsal guide
Reference	PAC/CDP/GUIDE/001
Date	20 October 2026 (third edition)
Scope	A step by step guide for PAC managers to test the whole platform themselves, from a new client with nothing in it to the next cycle, as every role, before a real client does
Status	Updated for the engagement Overview and tabs, the client logo, the full length report and the Leadership 360 preview. Every step in Part A is run end to end against the platform with exactly the data in this guide before each edition. Part B follows the two demo clients already in the platform.

1 Start here

1.1 Why this guide exists

This guide lets a PAC manager test the platform end to end without help. It puts the work in the order it happens, says who does each step and where to click, gives every value to type, and says what you should see. Part A builds a new client from nothing (about two hours, spread over a day because the survey window must close). Part B walks two prepared clients in about 25 minutes. Note anything that does not match this guide, with the step number, and send it to the platform team.

One thing to know first: the setup form exists only while a client is in the Setup stage. A client that has already been scored shows its results instead.

1.2 The order of the whole product

Table 1 The order of the whole product

Step	Who	Where	What happens
1	Super Admin	Organisations	Create the client organisation, then its first engagement
2	Super Admin	Users	Give a PAC Consultant access to the engagement; create the Client Admin, an Executive and a People Leader
3	Client Admin	Engagement, Organisation tab	Upload the people: grades, locations, units, people, leaders; upload the client logo
4	PAC Consultant	Engagement, Setup and launch tab	Create the assessment and its survey window
5	PAC Consultant with the executives	Setup sections A to I	Fill and agree nine sections, each with a workshop date and at least two executives
6	PAC Consultant	Consent text, Transfer basis	Approve the wording people agree to; record the cross border transfer basis
7	PAC Consultant	Launch checks	Eight checks; the blocking ones must pass; then Launch
8	PAC Consultant	Survey links	Issue one personal link per person on the roster

Step	Who	Where	What happens
9	Everyone surveyed	The link	Answer anonymously: about 40 minutes
10	PAC Consultant	Engagement Overview, Next step	Freeze the data, run scoring, freeze the score, run findings
11	PAC Consultant	Overview, Next step, then the report	Create the report, write the sections, release; download the full report, the brief and the deck
12	Client roles	Portfolio, report	See the report only after release
13	PAC Consultant	Action plan and Measure tabs	Plan, track, review, pulse, compare, start the next cycle

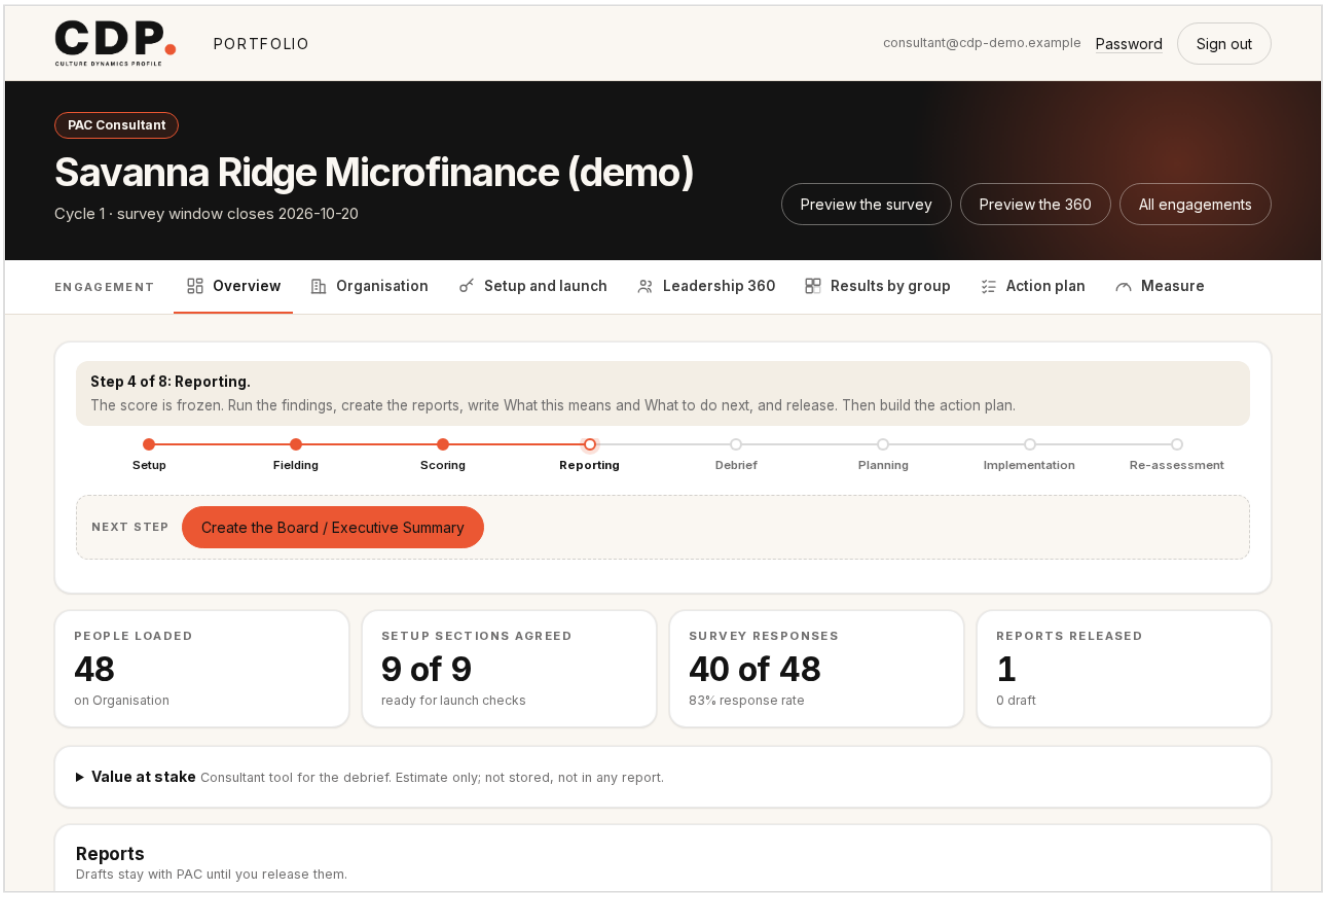

1.3 If you are lost

Open **Portfolio** and press **Open engagement** on the client card. Every engagement opens on its **Overview**: the stage, **Step N of 8**, one sentence on what to do next, the button for it, and the counts that matter (people loaded, sections agreed, responses, reports). A tab bar under the title reaches everything else in one click:

Table 2 If you are lost

Tab	What is there	Who sees it
Overview	Stage, next step, counts, reports, previews	Everyone on the engagement
Organisation	Units, people, leaders, and the client logo	Consultant and Client Admin
Setup and launch	Assessment, sections A to I, consent, transfer basis, launch checks, survey links	Consultant
Leadership 360	Nominations, links, leader results	Consultant; client roles after release
Results by group	Segments, with small groups hidden	Consultant
Action plan	Priorities, actions, KPIs, evidence	Consultant; client roles after release
Measure	Trend, pulses, triggers, next cycle	Consultant, Client Admin and Executive after release

The setup tab opens with **The order of the work**, a ticked list of the steps in section 3.

1.4 Logins

Sign in at https://culture.pac.africa/login, or press **Sign in** under **Start here** at the foot of the home page. The passwords are in the confidential document **CDP Demo Logins and Status** (17 October 2026) on the Desktop. They are not repeated here.

Table 3 Logins

Role	Login	Used for
Super Admin	superadmin@cdp-demo.example	Steps 1 and 2
PAC Consultant	consultant@cdp-demo.example	Steps 4 to 11 and 13
Client Admin, Executive, People Leader	created by you in step 2	Steps 3 and 12
Demo client roles	demo@cdp-demo.example (Savanna Ridge), admin.meridian@, exec.meridian@, lead.meridian@cdp-demo.example (Ostravane)	Part B

New users must replace their temporary password when they first sign in: 12 or more characters with upper case, lower case and a number.

2 What changed on 18 October

Read this first if you used the earlier edition. The steps below still work, with these differences.

- **Sections E, F and G need two entries.** Open **Perspectives** (a tab on the engagement). The Client Admin or the consultant saves an Executive entry and an HR entry for each of E, F and G. The consultant compares them side by side, notes where they differ, and only then agrees the shared section. Agreeing without both entries is refused.
- **Order of work.** B, C and D are agreed before E, F and G. B to G are agreed before Section I.
- **Executives confirm.** Once a section is agreed, an Executive can tick it as confirmed on the read only **Setup review** page.
- **Facilitator.** On each workshop record you pick the facilitator from the consultants assigned to the engagement. Participants must be people already loaded in the organisation whose grade is marked executive. Typed names no longer count.
- **Scorecard.** A new **Scorecard** tab holds objectives and KPIs. One button imports them from Sections C and D. Once the scorecard has rows, the launch check L4 reads it.
- **Section I is longer.** It now has cohorts, the anonymity commitment, the reminder plan, the demographic attributes people will be asked about (each with a purpose), and a tick to say the staff message states purpose, use of results, anonymity and next steps.
- **Launch checks.** There are now more than L1 to L8: a DPIA check, the cohort sizes, the review period overlap, a public holidays warning and the staff message checks. L7 and L8 now report real differences. The consultant types the public holidays under the calendar on the launch panel.
- **Staff message approval.** Launch is blocked until the owner approves the two staff message drafts on the **Staff messages** page (Super Admin menu). During a rehearsal you will see check I5 fail until that is done. This is intended.
- **Privacy tab.** It holds the DPIA record, the processing register, sub processors, breach incidents with the 72 hour clock, data subject requests, retention and the destruction certificate, demographic attributes and coach assignments.
- **Survey changes.** After consent, respondents may see an **About you** screen with closed lists and a Prefer not to say answer. Every survey screen now links to the rights page where people can ask for access, correction, objection or erasure.
- **Raters.** A **Raters** tab lets a leader propose raters and a line manager or Client Admin approve them (three to eight peers). The consultant sets the rater dates per leader.
- **After launch.** Holidays and the review period can still be corrected, and the staff message wording can be edited, both audited. Anything that changes scoring needs a new assessment version, and that is refused once anyone has answered.

3 What changed on 20 October (Journey 2)

- **Two more launch checks.** EXG: at least one grade must be marked executive. EXT: an Executive must have ticked each of sections A to D on the **Setup review** page. Both block launch. Editing a section clears its tick, so it has to be ticked again.
- **Currency.** Each client has one currency, set on the **Organisations** screen. Money KPIs imported from Section C take it. Without it they are skipped, and the reason is shown.

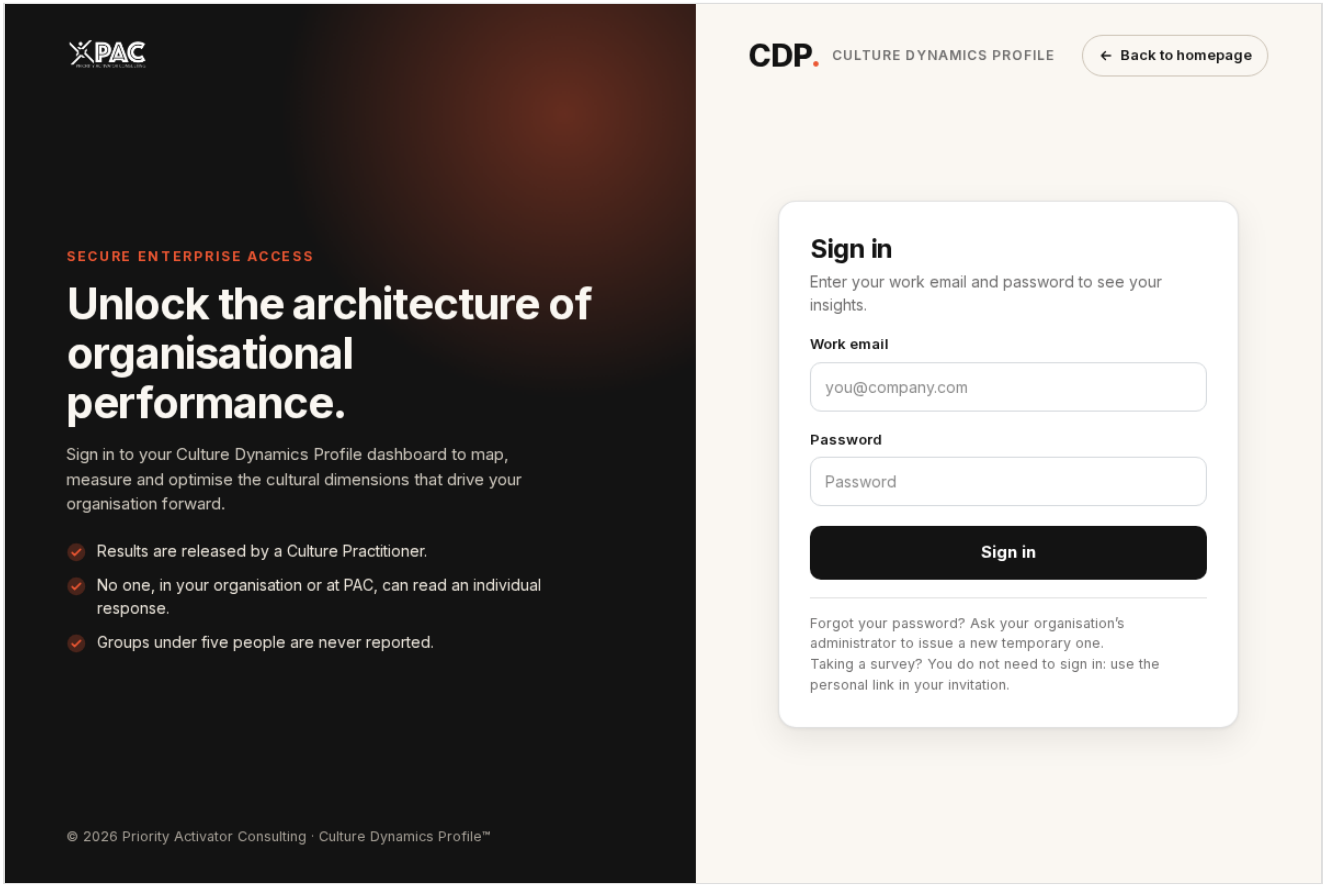

- **Section A across clients.** The Super Admin menu has a **Section A** page listing name, sector, headcount and countries for every client. It can be edited until the client's latest engagement launches.
- **B6 pre-filled.** Section B starts with a business model suggested from the sector and maturity stage. This is a draft table for faculty review; change it freely.
- **The survey.** Each statement shows its orientation name. The counter reads "x of 36 scenario sets". The arrow keys change the points by 1 (or 5 with Shift). A practice scenario comes first and is never saved. Answers are saved on the server after every screen, encrypted, so a respondent can resume on another device. On the practice screen a respondent may tick "submit what I have if the survey closes". If ticked, the fully answered scenarios are submitted when the data is frozen. Half done ones are left out.
- **The Fielding tab** (consultant and Client Admin, after launch) shows:
  - **Response monitor:** invited, started and submitted by cohort. Cohorts under five are folded into one line, and nobody is named.
  - **Window:** the close date and any extensions. The consultant may extend once, by up to 5 working days, with a reason. A second extension needs the Super Admin. There is no third.
  - **Quality:** the median time and the flags (for example speeding), by response number only, never the answers. The consultant can void a response with a reason. The void is logged and cannot be undone.
  - **360 comments:** after freeze, the consultant reads each leader's rater comments and may redact one. The original is kept, encrypted.
- **Reminders** go out once a day by themselves: on working days 3 and 6, 24 hours before close, and a final one only to people who started but did not submit. Nobody who has submitted gets one.
- **An objection stops the links.** If a respondent objects on the rights page, their survey, 360 and pulse links stop working at once.
- **Leadership 360 forms** now have open questions (draft wording until PAC sends the v1.1 forms) and an integrity notice that each person ticks before submitting. A rater answering outside the leader's rater dates gets the "link no longer active" page.
- **Freeze** now records a summary: invited, started, submitted, abandoned, voided, auto submitted, extensions and the fingerprint.
- **New rules for new assessments (2.1).** A response counts as speeding below 40% of the median time, any two quality flags exclude it, and a 360 section needs at least three observed items. Assessments scored earlier keep their rules and give the same results.

4 Before you begin

You need three things on your computer.

1. **The organisation files.** Five CSV files in the folder `rehearsal-data`: `grades.csv`, `locations.csv`, `units.csv`, `people.csv` and `leaders.csv`. They describe a made up company of 40 people. They are also in the repository under `docs/rehearsal-data`.
2. **A private browser window** for answering surveys as someone else.
3. **Claude.** Three small jobs are done for you on request: set the survey close time a few hours ahead (step 4), answer the surveys you do not answer yourself (step 9), and clear the rehearsal client afterwards.

The client is called **Kilima Foods (rehearsal)**. The word in brackets matters: it marks the client as a rehearsal so it can be removed later. Everything is fictional. Emails end in `@kilima-rehearsal.example`, which nobody owns, so never tick "Email each person their link".

5 Part A: a new client from zero

5.1 Step 1. Create the organisation (Super Admin)

Sign in as the Super Admin. Open **Organisations**. Under **Add an organisation** type:

Table 4 Step 1. Create the organisation (Super Admin)

Field	Value
Name	Kilima Foods (rehearsal)
Legal name	Kilima Foods Limited
Sector	Retail
Headcount	40
Countries	KE
Time zone	Africa/Nairobi
Privacy regime	Kenya Data Protection Act 2019 (the first Kenya option)
Hosting region	`eu-west-1`

Press **Create organisation**. The organisation appears in the list. Press **New engagement** on its row. You should see the message that an engagement was created and that a consultant must be assigned.

Say: "The organisation and its engagement are created by PAC only. The privacy regime and hosting region cannot change once the engagement has launched."

5.2 Step 2. People and access (Super Admin)

Open **Users**.

1. Under **PAC Consultant access**, find the consultant `consultant@cdp-demo.example`, choose **Kilima Foods (rehearsal), cycle 1**, leave the date, press **Assign**. The consultant now sees the client.
2. Under **Add a user**, create three users for the organisation Kilima Foods (rehearsal):

Table 5 Step 2. People and access (Super Admin)

Full name	Work email	Role
Grace Mwangi	grace.mwangi@kilima-rehearsal.example	Client Admin
Wanjiru Kamau	wanjiru.kamau@kilima-rehearsal.example	Executive
Peter Njoroge	peter.njoroge@kilima-rehearsal.example	People Leader

After each one a blue box shows a **temporary password, once**. Press **Copy** and keep it in a note for the rehearsal. Leave "Assign to engagement" empty for client roles.

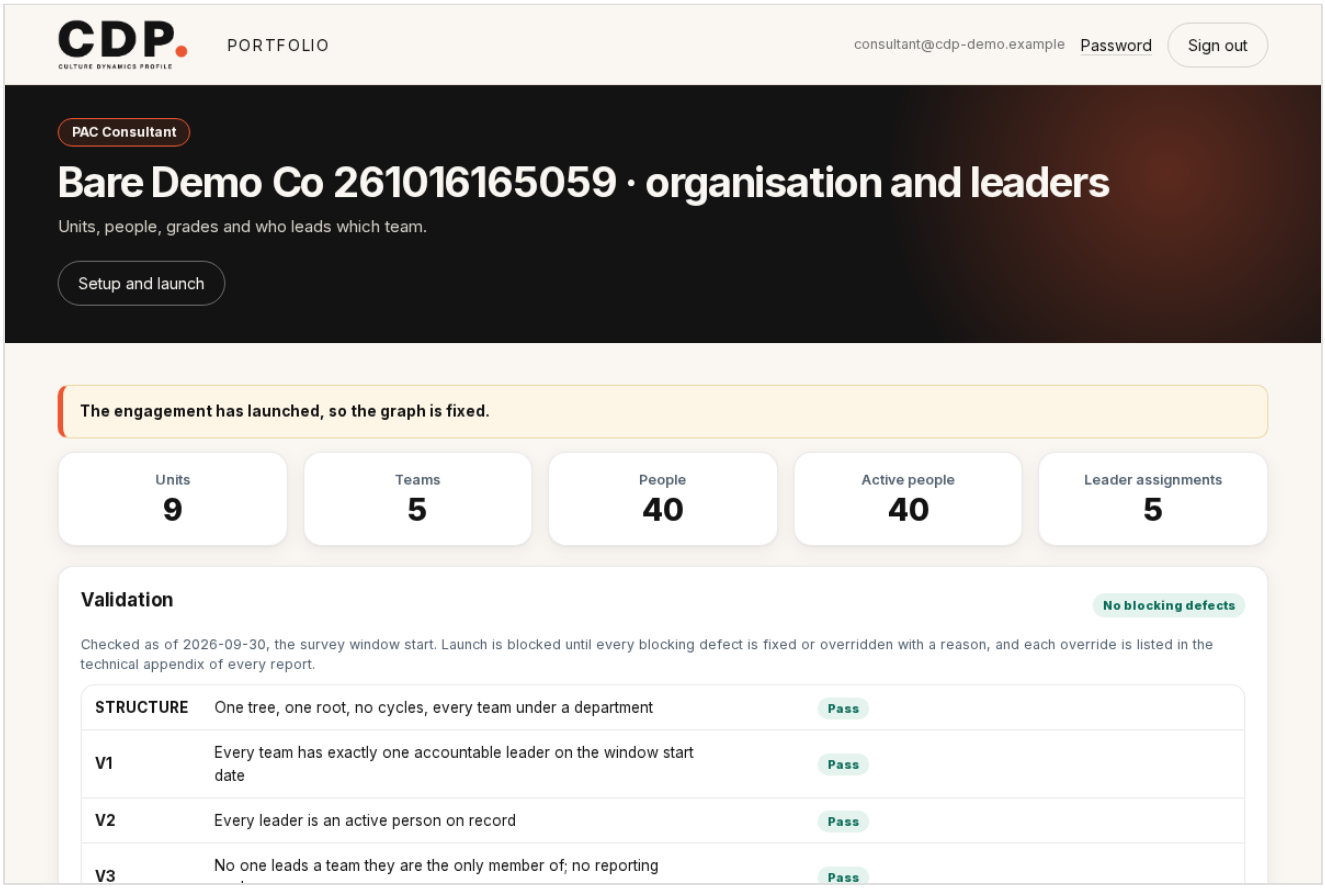

The People Leader is linked to a person on the roster in step 3, once the people exist.

Say: "Passwords are shown once and never stored. A consultant only sees an engagement while an assignment is in force."

5.3 Step 3. Load the organisation (Client Admin)

Sign in as Grace Mwangi. Replace the temporary password when asked. On **Portfolio**, the Kilima card says **Step 1 of 8: Setup**. Press **Open engagement**, then the **Organisation** tab.

For each of the five rows under **Import**, press **Choose file** and pick the matching CSV from `rehearsal-data`. When all five are chosen, press **Save 5 files**. The **Validation** panel should read **No blocking defects** and the counts should show 9 units, 5 teams, 40 people, 5 leader assignments.

What the files contain: three departments (Operations, Finance, Sales); five teams of eight; each team's first person is an Executive and its leader; the second person is a Manager; the rest are Staff. Five executives is exactly the floor for reporting executives as a group. Teams are in Nairobi and Mombasa.

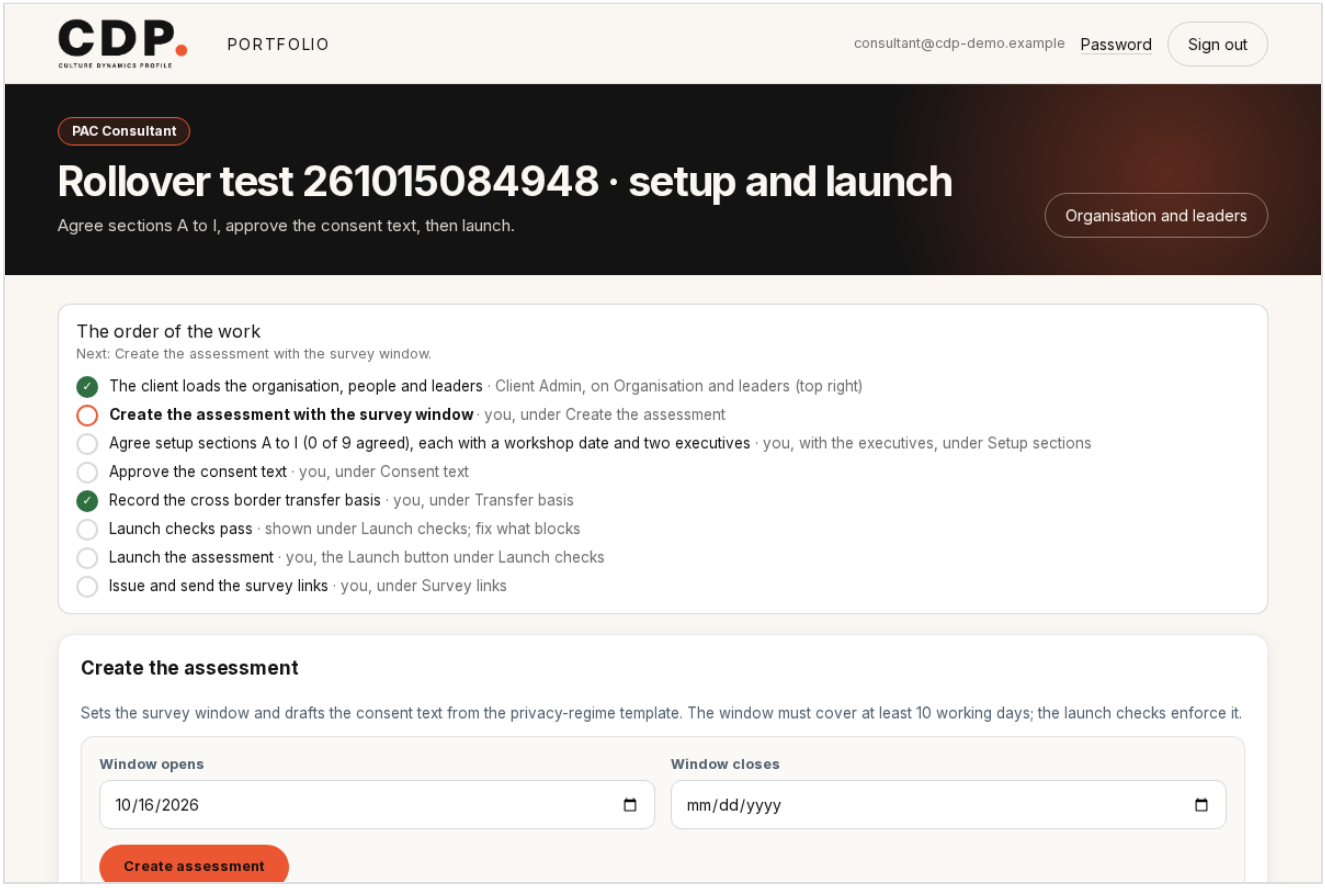

The client logo. At the top of the Organisation tab, under **Client logo**, press **Upload logo** and choose any PNG or JPEG under 200 KB (a company logo from your computer will do). It appears on the cover of every released report, the PDF and the PowerPoint, beside *Presented by Priority Activator Consulting*. Try a file over 200 KB once: it is refused.

Say: "The organisation graph is checked against seven rules. Launch is blocked until every team has exactly one accountable leader and every person sits in one team."

Back as Super Admin, open **Users** and, in the row for Peter Njoroge, choose **K001** in the **Linked person** list. Peter leads the Warehouse team and will see its results later.

5.4 Step 4. Create the assessment (PAC Consultant)

Sign in as the consultant. On **Portfolio**, find **Kilima Foods (rehearsal)** and press **Open engagement**. The Overview says **Step 1 of 8: Setup** and its next step button says **Set up the assessment**. Press it, or press the **Setup and launch** tab: they open the same page. This is the setup form that was missed in the demo. The page opens with **The order of the work**.

Under **Create the assessment**:

Table 6 Step 4. Create the assessment (PAC Consultant)

Field	Value
Window opens	16 days before today
Window closes	today

Press **Create assessment**. The page now offers sections, consent text, transfer basis and launch checks.

Ask Claude: "Set the rehearsal close time." Claude moves the closing time to three hours from now, so you can freeze the data the same day. This is only possible before you press Launch, and only for a client whose name ends in "(rehearsal)". A real client keeps its dates.

Say: "A survey window must cover at least ten working days. It is set once, before launch."

5.5 Step 5. Fill and agree the nine sections (PAC Consultant)

Under **Setup sections**, press **Edit** on each section A to I. For each: fill the fields below, fill the **Workshop record**, press **Save draft**, then **Agree**.

For every section's workshop record use:

Table 7 Step 5. Fill and agree the nine sections (PAC Consultant)

Field	Value
Workshop date	30 days before today (it cannot be in the future)
Participants, one per line	Wanjiru Kamau (Chief Executive) / Otieno Ochieng (Chief People Officer) / Amina Hassan (Chief Financial Officer)

A section cannot be agreed without a date and two named executives. If you try, the page tells you what is missing. Try it once on purpose.

Section A, Organisation context. The name, sector and size come from the organisation. Maturity stage: **Growth**. Why the organisation is doing this assessment: *The business is moving more orders online and leadership wants a baseline of how people experience the culture before the change.*

Section B, Strategy and business model.

Table 8 Step 5. Fill and agree the nine sections (PAC Consultant)

Field	Value
Strategic intent	Grow online ordering while keeping the freshness and service customers trust us for.
Strategic horizon	Three years
Priority 1	Grow online ordering. Goal type: Innovation and new models
Priority 2	Differentiate on freshness and service through new digital journeys. Goal type: Innovation and new models
Competitive positioning	Quality, Innovation
Business model today	Service, B2C

Section C, Performance and scorecard. Add five KPIs:

Table 9 Step 5. Fill and agree the nine sections (PAC Consultant)

KPI	Unit	Direction	Baseline	Baseline date	Source	Orientation it tracks
Voluntary attrition (%)	Percent	Lower is better	19	30 June 2026	HR system	Engage
Share of orders placed online (%)	Percent	Higher is better	28	30 June 2026	Order system	Innovate
Order to delivery time (days)	Days	Lower is better	21	30 June 2026	Operations log	Govern

KPI	Unit	Direction	Baseline	Baseline date	Source	Orientation it tracks
Revenue growth (%)	Percent	Higher is better	4	30 June 2026	Finance	none
Customer satisfaction score	Score	Higher is better	70	30 June 2026	Customer survey	none

Then: performance trend **Improving**; biggest performance gap *Decisions take too long to reach the shop floor.*; voluntary attrition **19**; average time to hire **45** days. Only one KPI may track each orientation.

Section D, Targets and standards. Section D needs Section C saved first. For each KPI the 12 month target: **13, 45, 7, 6, 75**. The 3 year target for the delivery time KPI: **6**. Definition of winning: *Be the first choice for fresh produce ordered online in our cities.* Board metrics: *Attrition, online share and delivery time.* Non negotiable standards: *Food safety and on time delivery*. A target on the wrong side of its baseline is refused. Try 30 for attrition once.

Section E, Lived culture. Six short texts:

1. Managers decide, staff are told afterwards.
2. Disagreement is kept quiet and shows up as slow delivery.
3. Recognition is for hitting the number, rarely for helping someone.
4. A few long serving supervisors hold real influence.
5. Weekly meetings are long and one way.
6. Information is held back until it is too late to act.

Section F, Target behaviours. Five leadership behaviours, each tagged with an orientation. They must describe something you can see someone do, not a value:

Table 10 Step 5. Fill and agree the nine sections (PAC Consultant)

Behaviour	Orientation
Asks the team for their view before deciding	Engage
Thanks a person by name for good work each week	Engage
Explains the reason behind a decision in the team meeting	Engage
Reviews the weekly numbers with the team and agrees one action	Perform
Spends time on the shop floor listening to staff	Engage

Five staff behaviours (no tag needed): *Raises a problem early instead of hiding it / Shares what they learn with the team / Tries a new way of working on a small scale / Asks for help when stuck / Keeps customers informed of delays.* Decision making model: *Consultative, with a clear owner for the final call.* Collaboration model: *Across warehouse, delivery and sales in one weekly huddle.* Innovation risk appetite: **Moderate**. Four Engage tags and one Perform tag mean the leadership target is **Engage**. Try tagging two Engage, two Innovate and one Perform: the section will not agree because the tie has no tie break.

Section G, Stop, start and keep. Three lines each:

Table 11 Step 5. Fill and agree the nine sections (PAC Consultant)

List	Entries
Stop: leadership	Deciding without asking the team / Correcting people in front of others / Holding back bad news
Stop: practices	Long one way weekly meetings / Approvals that need three signatures / Paper delivery notes
Start: leadership	Asking for the team's view first / Thanking people by name / Sharing numbers openly each week
Start: practices	A short weekly huddle across teams / One page decision rights / Online delivery confirmation
Keep and protect	Our food safety standards

Section H, Processes and enablers. Six short texts: *Annual review with a yearly rating.* / *A one day induction, then on the job.* / *Promotion goes to the best sales or delivery numbers.* / *Bonuses are paid on volume only.* / *Approvals wait for the finance manager.* / *A new online ordering system next year.* Tick **H3 contradicts what happens in practice** and **H4 contradicts what happens in practice**. Leave H1 unticked. These ticks later feed the finding that systems are fighting the strategy.

Section I, Survey design.

Table 12 Step 5. Fill and agree the nine sections (PAC Consultant)

Field	Value
Anonymity commitment	Full
Languages	English
Message to staff	We are running the Culture Dynamics Profile to understand how work really happens here and how we want it to be. It takes about 40 minutes. Your answers are anonymous: your name is separated from them when you submit, and results are only shown for groups of five or more. Thank you for being honest.
Qualitative complement	None
Completion time statement	35 to 45 minutes
Reminder plan	Standard

When all nine show **Agreed**, the step list on this page ticks.

Say: "Nine sections are agreed with the executive team in a workshop. The agreed record is what scoring uses. Editing an agreed section sends it back to draft, and after launch the sections are locked."

5.6 Step 6. Consent text and transfer basis (PAC Consultant)

Under **Consent text**, read the draft. It states that a submitted response cannot be individually retrieved or deleted. Press **Approve**. Under **Transfer basis**, type *Data transfer agreement with the hosting provider, signed 2 October 2026 (rehearsal placeholder)* and press **Record**.

The consent wording is a draft and still needs review by PAC legal or the data protection officer before a real client. Say so out loud.

5.7 Step 7. Launch checks and launch (PAC Consultant)

Under **Launch checks** you should see every check listed. Blocking checks stop the launch, warnings do not. To see a block, open the page before step 6: it lists exactly which checks fail. Check I5 stays red until the owner approves the staff message drafts.

Press **Launch assessment** and confirm. The page now says **Launched**: setup, window and consent are locked.

5.8 Step 8. Issue the survey links (PAC Consultant)

Under **Survey links**, press **Issue a link for everyone on the roster**. Then **Download CSV**: a file named `survey-links.csv` with a name, an email and a personal link for each of the 40 people. The links are shown once and are not stored, only their fingerprint is.

Open the file. Find the three people you will answer for:

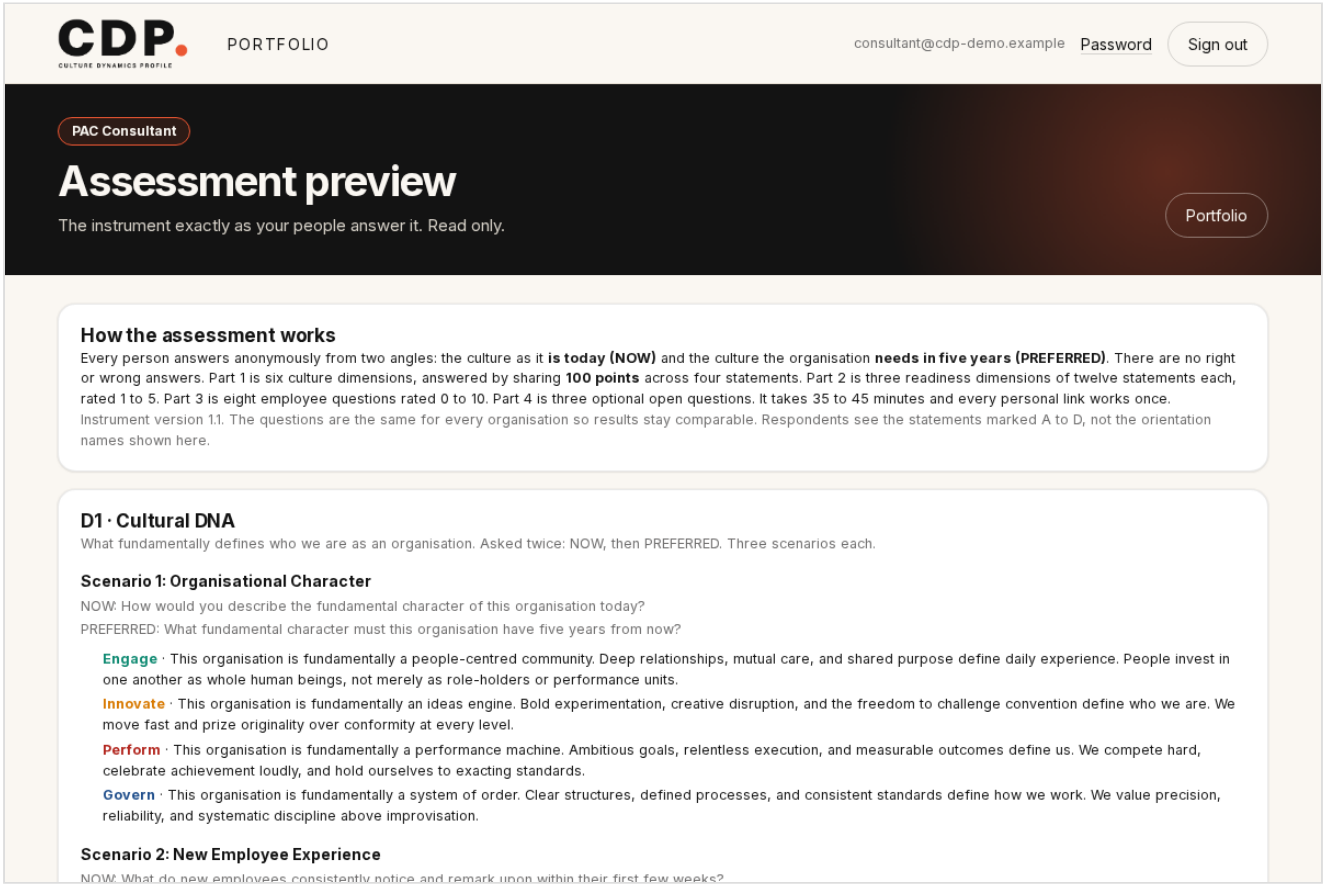

Table 13 Step 8. Issue the survey links (PAC Consultant)

Persona	Email in the file	Role in the story
A	k001@kilima-rehearsal.example	An executive, leader of the Warehouse team
B	k002@kilima-rehearsal.example	A manager
C	k003@kilima-rehearsal.example	A member of staff

Say: "Each link works once. Nobody, including PAC, can tie an answer to a person after it is submitted."

5.9 Step 9. Answer the surveys (you, as three people)

Open the preview first: on the engagement Overview, press **Preview the survey**. It shows all 18 scenarios, the readiness statements, the eight employee questions and the three open questions, exactly as respondents get them. Press **Preview the 360** beside it to see the Leadership 360 rater form the same way (the preview page also offers the self assessment). Nothing you choose in a preview is stored.

A respondent can also start from the home page: under **Start here**, paste the link into **Take the CDP assessment** and press **Begin or resume**. Open Persona A's link in a **private window**. You see the invitation page, then the consent text. Press **I agree**. Then answer using the sheet below. Repeat for B and C in new private windows.

Answer sheet. The four boxes in each scenario are A, B, C, D (Engage, Innovate, Perform, Govern, in that order, not shown to the respondent). Type A, B and C, then press **Fill remainder** to get D. Every set must total exactly 100.

Table 14 Step 9. Answer the surveys (you, as three people)

	NOW: A, B, C, D	PREFERRED: A, B, C, D
Persona A (executive)	30, 16, 32, 22	32, 24, 28, 16
Persona B (manager)	22, 14, 34, 30	31, 25, 28, 16
Persona C (staff)	22, 14, 34, 30	31, 25, 28, 16

To avoid a flat pattern, in the third scenario of every dimension swap C and D. The three NOW and three PREFERRED screens per dimension are the 36 sets.

Readiness (D7, D8, D9). Twelve statements each, rated 1 to 5. D7: statements 1 to 6 rate **4**, statements 7 to 12 rate **3**. D8: statements 1 to 3 rate **2**, the rest **3**. D9: all **3**, except statements 10 to 12 rate **4**.

Employee questions (eOS), 0 to 10: Q1 to Q8: **8, 7, 6, 7, 8, 5, 9, 8**.

Open questions: optional. Leave blank or type *People care about each other here.* / *Decisions are slow and made far from the work.* / *Let the people doing the job make more of the decisions.*

Review and press **Submit my response**. Reopen the same link: it says the link is no longer active, with no other detail. This is on purpose.

Then **ask Claude: "Fill the rest."** Claude answers the other 37 surveys from the downloaded file using the same routes the survey page uses, with an executive pattern for the five executives and a staff pattern for everyone else. Executives see a little more Engage than staff, so the Executives and staff panel has something to show.

Back as the consultant, open the **Fielding** tab: the response monitor shows 40 invited and 40 submitted by cohort, as totals only. The quality panel lists any flagged responses by number.

5.10 Step 10. Freeze, score, findings (PAC Consultant)

Wait until the close time Claude set has passed (three hours after step 4). On the engagement **Overview** (and on the Portfolio card) the next step changes, one button at a time:

Table 15 Step 10. Freeze, score, findings (PAC Consultant)

Button	What it does
Freeze the data	Closes the data set and records its fingerprint. Refused while the window is open.
Run scoring	The deterministic engine scores the frozen data and stores the result with a hash
Freeze the score	The score is fixed
Run findings	The four alignment checks, signals and matched scenarios are stored

Say: "Scoring is the same every time. Run it a hundred times on the same data and you get the same hash. Nothing is recalculated when a report is opened."

5.11 Step 11. Report and release (PAC Consultant)

Press **Create the organisational report**, then open it. The draft box at the top holds four texts:

Table 16 Step 11. Report and release (PAC Consultant)

Text	What to do
What this means	Required. Suggested: *The organisation is led by Perform and Govern today. People want more Engage and Innovate.*
What to do next	Required. Suggested: *Agree priority zero with the executive team, then build Engage and Innovate capability.*
First 14 days	Already drafted from the findings, one action per line. Read it and change a line.
Facilitation guide	The PAC template for the three debrief sessions. Leave it or add a line for this client.

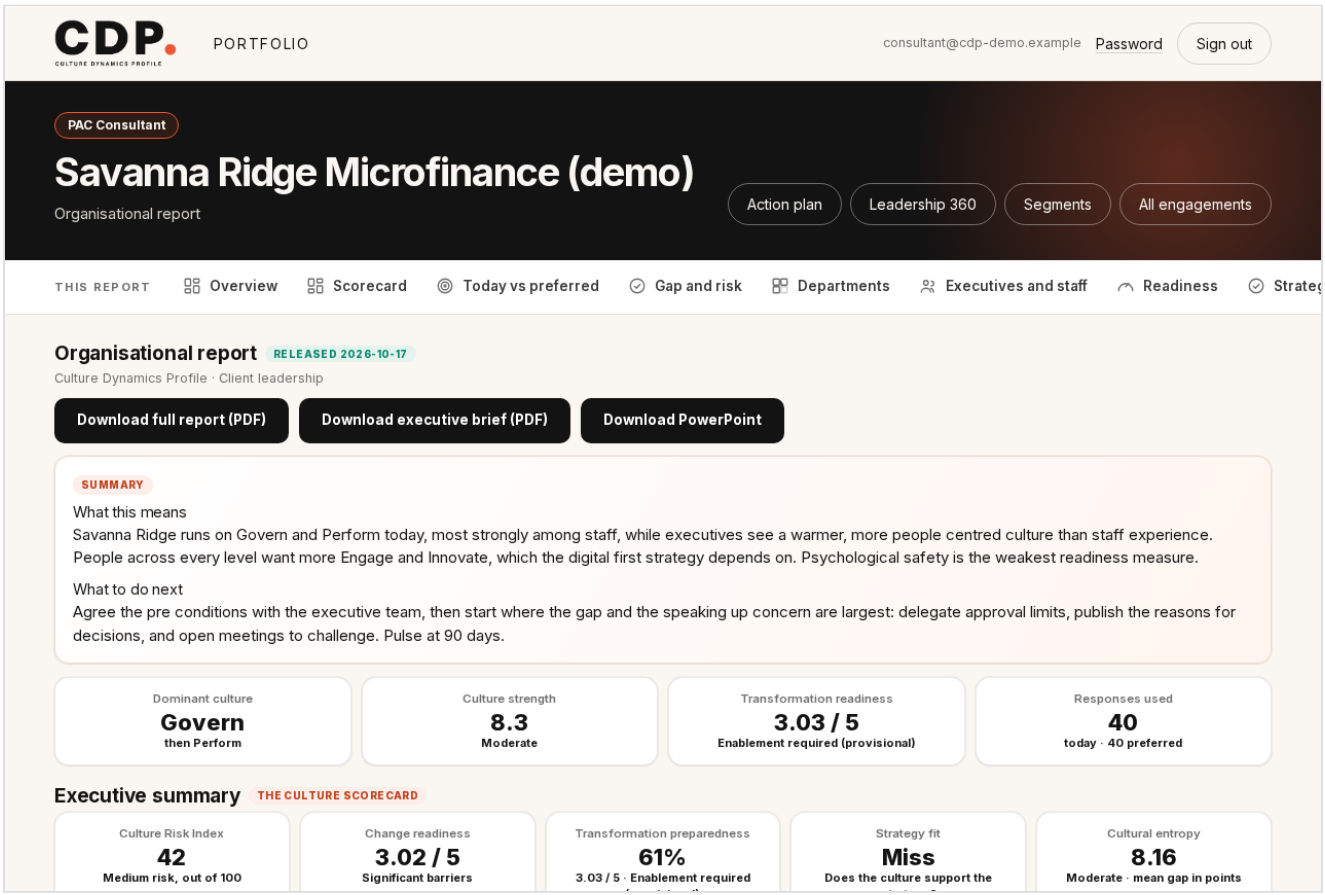

Open **Your notes per chapter of the full report** and add one sentence to the Executive summary chapter, for example *Read this report with the Big Three first.* Each note prints at the end of its chapter in the full report. Then press **Save and accept**, then **Release to client**. Release is refused if either required section is empty: try it once.

After release the report page offers three downloads:

Table 17 Step 11. Report and release (PAC Consultant)

Download	What it is
Download full report (PDF)	About 35 pages in the shape of the Geminia report: cover with the client logo, contents, executive summary with the scorecard and the Big Three, method, the culture today, a page per dimension, the gap, executives and staff, departments, employee voice, readiness, the risk dashboard, hits and misses, the Leadership 360 summary, recommendations and roadmap, the KPI scorecard and four appendices
Download executive brief (PDF)	About 7 pages: the headline figures and the key tables
Download PowerPoint	About 30 slides with native charts, in the order of the pitch deck, including a slide per dimension and the roadmap

Every page is marked confidential, with the client name, score version and hash in the footer. On the page itself, the same chapters are under **The full report**, collapsed: open any chapter to read it on screen.

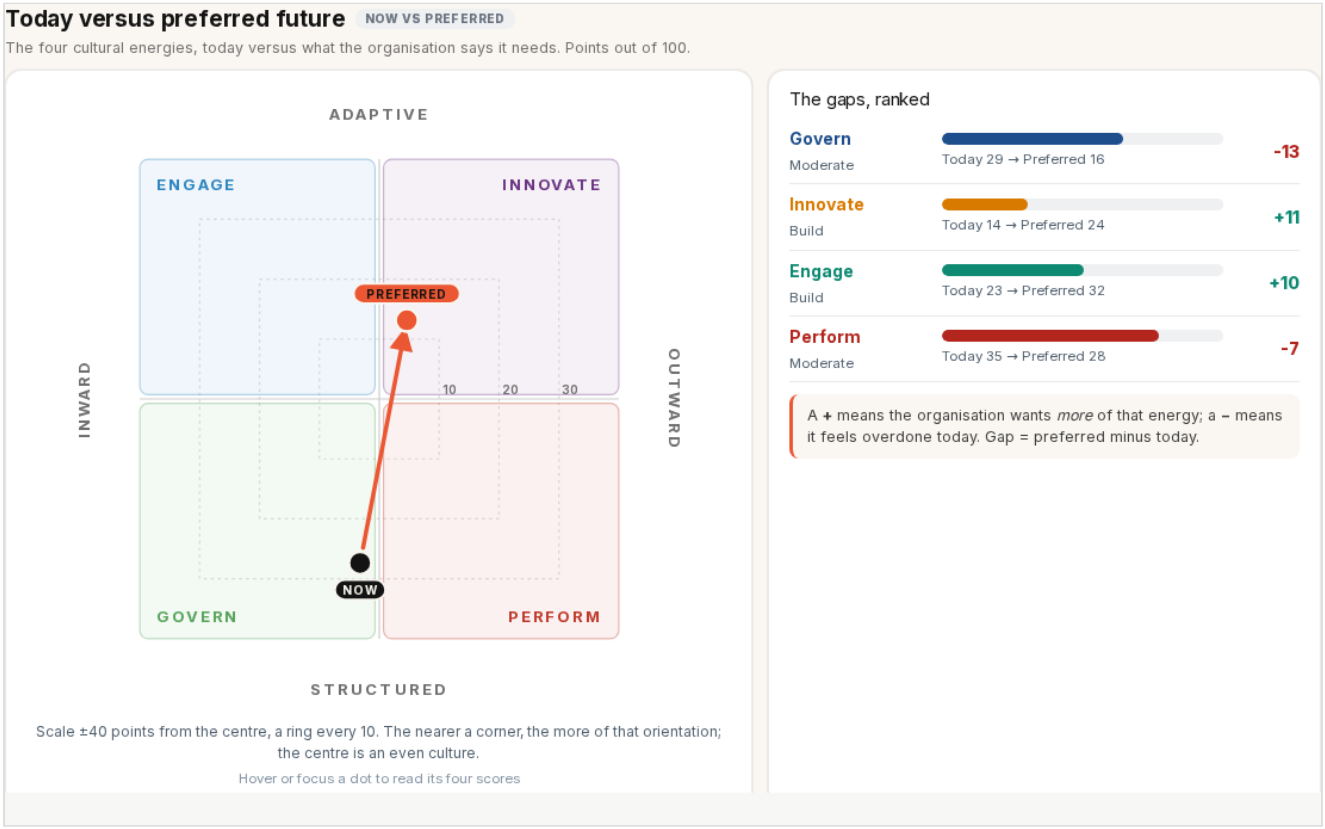

What you should see (your three hand answers move the figures a little, by a point or two at most):

Table 18 Step 11. Report and release (PAC Consultant)

Measure	Expected
Now, Engage / Innovate / Perform / Govern	about 23 / 14 / 35 / 29
Preferred	about 32 / 24 / 28 / 16
Gaps	Engage +9 to +10, Innovate +10 to +11, Perform about −7, Govern about −13
Dominant culture today	Perform, then Govern
Transformation readiness	about 3.2, band Enablement required, marked provisional
Alignment checks	C1 Miss, C2 Miss, C3 Systemic miss, C4 Partial hit
Executives and staff	Engage and Govern about 8 points apart: Shadow culture
Scenarios	Shadow culture; Delivery without belonging; Systems fighting the strategy
Full report	Cultural entropy, tensions, the Culture Risk Index and a risk dashboard against PAC targets, all from this score

The **Culture map** shows today and preferred as two dots on the four squares: the nearer a corner, the more of that orientation, the centre is an even culture, and the arrow is the gap.

5.12 Step 12. The client roles (Executive, People Leader, Client Admin)

Sign in as Wanjiru Kamau (Executive) and Peter Njoroge (People Leader) in private windows, after changing their temporary passwords.

Table 19 Step 12. The client roles (Executive, People Leader, Client Admin)

Try this	What you should see
Executive opens Portfolio before you released	Nothing shared yet. The report does not exist for them.
Executive after release	The organisational report, Action plan (empty until a plan is built) and Measure
People Leader after release	The organisational report and **My team**, the Warehouse team results, because all 8 answered. A team under 5 would show "too few people answered".
Client Admin	The report, the Organisation tab, Users for the organisation
Super Admin	Never any client result or any answer, by design

Say: "No role, not even PAC, can read an individual answer. Reports reach a client only after a PAC consultant releases them."

5.13 Step 13. After the report

As the consultant you can build the plan now: open the **Action plan** tab and press **Build the action plan**. The engine drafts priorities and actions from the findings; every action starts as a draft for you to review. Once the plan exists, export the full report again: its Recommendations and roadmap chapter now lists the priorities and actions.

The Overview also holds **Value at stake**, a consultant only calculator for the debrief: headcount, salary, attrition and three assumptions give an estimate of the annual value of closing the gaps. Nothing is stored and it never appears in a report. Then follow the next step buttons: start the debrief, plan, implementation and re assessment, each moved on by the engine's checks. Part B shows the rest of the cycle on clients that already have it.

6 Part B: two prepared clients, about 25 minutes

Sign in as the consultant. Use **Savanna Ridge Microfinance (demo)** for the report and **Ostravane Logistics (demo)** for the cycle after the report: Ostravane has two cycles, pulses, a trend and a next cycle. Follow the order and say the sentence.

Table 20 Part B: two prepared clients, about 25 minutes

Min	Where	Do	Say
0	Home page	Show the hero, the numbers strip and **Start here**	"Your strategy is written. Is your culture able to deliver it? That is the question CDP answers."
2	Portfolio, Savanna Ridge, Open engagement	Read the Overview and the tab bar	"Every client shows where it is, what comes next, and every part of the work is one tab away."
4	Overview, Preview the survey and Preview the 360	Scroll both	"This is exactly what your people answer: eighteen scenarios, then readiness and employee questions. Leaders get a 60 item 360."
6	Savanna report	Scorecard, the Big Three, the culture map, values against reality	"Four headline measures, one accelerator and two blockers, and where the culture is against where it needs to be."
9	Savanna report	Gap, tension and risk; employee voice; departments	"Entropy is the energy lost in the gap. Tension shows where the change pulls two ways. Departments under five are never shown."
12	Savanna report	Download full report (PDF), then the executive brief and the PowerPoint	"The full report is about 35 pages for the leadership team; the brief and the deck are for the Board."
15	Savanna, Leadership 360 tab	Open Amina Odhiambo's result	"Self against raters, the five strongest and weakest behaviours, and questions for reflection. Development only."
17	Savanna, Action plan tab	Pre conditions, priorities, an action	"The plan comes from the findings. Nothing publishes while a pre condition is open."

Min	Where	Do	Say
19	Ostravane, Measure tab	Trend comparison, a closed pulse	"Movement and delivery are shown side by side. A pulse is a short check at 90 and 180 days, never below five answers."
22	Ostravane, Measure tab	Triggers and Next cycle	"A trigger opens a review, never an automatic survey. The next cycle carries what still matters."
24	A private window	Sign in as demo@cdp-demo.example	"This is what the client sees: only what has been released to them."

Also say, without being asked: the instrument is the same for every organisation so results stay comparable; scoring is deterministic and hashed; individual answers cannot be read by any role.

7 What can go wrong, and what to say

Table 21 What can go wrong, and what to say

You meet	What it means	Say or do
"This link is no longer active"	The link was used, or the window closed, or it is unknown. All three look the same on purpose.	"It cannot show why, so a link cannot be probed."
"Too few people answered"	A group under five.	"This protects anonymity; the group is counted in the organisation's results."
Launch checks block	A named check fails, for example no consent approval or an unfinished section.	Fix what the page names.
Cannot freeze	The window is still open.	Wait for the close time.
Publishing blocked by a pre condition	A finding that needs a pre condition item first.	"The plan makes the leadership team do the groundwork first."
A report section says not available	The client was scored before that measure existed (before 17 October 2026).	"New assessments carry it; this one keeps the score it was frozen with."

Known limits to say before they are found.

- The consent wording is a draft and needs legal review.
- Staff sign in with a password; two step sign in is not enforced yet.
- The consultant launches. The specification has the Client Admin launch after the consultant approves; this is planned.
- Reminders to people who have not answered are not sent yet; the consultant re issues links.
- The organisational report has a full version and a brief; the Board summary exists; the sub culture, leader, leadership team and action plan reports are planned.
- Report text comes from a fixed PAC wording library driven by the data, plus the consultant's own notes; AI drafting comes after the first client.
- The survey is English only.
- A survey window cannot be extended after launch.
- The scoring and reporting figures are produced by one engine that has 271 tests and matches an independent Python version byte for byte.

8 Checklist and clean up

Tick as you rehearse.

- [ ] Created the organisation and engagement as Super Admin
- [ ] Assigned the consultant and created three client users
- [ ] Loaded the five CSVs as Client Admin and saw **No blocking defects**
- [ ] Uploaded a client logo on the Organisation tab
- [ ] Created the assessment and found the setup form from the engagement Overview
- [ ] Agreed all nine sections, including one refused attempt (no date)
- [ ] Approved the consent text and recorded the transfer basis
- [ ] Saw the launch checks pass and launched
- [ ] Issued the links and downloaded the CSV
- [ ] Answered as Persona A, B and C; saw the dead link afterwards
- [ ] Asked Claude to fill the rest; saw 40 of 40 on the Fielding monitor
- [ ] Froze, scored, ran findings
- [ ] Edited the first 14 days, added a chapter note, released, and downloaded the full report, the brief and the PowerPoint
- [ ] Signed in as Executive and People Leader and saw only their part
- [ ] Ran Part B in about 25 minutes without notes

Clean up. The rehearsal client, its people, its three users and its results stay in the live database until removed. Ask Claude to "clean up the rehearsal client". Removal is a destructive job and is done only on your approval: Claude runs a dry run first, keeps a backup, then removes that one client (`scripts/cleanup-test-tenants.mjs --only`).

9 Appendix A. The files

Table 22 Appendix A. The files

File	What it is
`docs/rehearsal-data/grades.csv`	4 grades: Board, Executive, Manager, Staff
`docs/rehearsal-data/locations.csv`	Nairobi, Mombasa
`docs/rehearsal-data/units.csv`	9 units: head office, 3 departments, 5 teams
`docs/rehearsal-data/people.csv`	40 people, K001 to K040
`docs/rehearsal-data/leaders.csv`	5 leader assignments, effective 1 January 2026

10 Appendix B. The jobs Claude runs for you

For the record; you do not need to run these.

- Set the close time: `node --env-file=apps/web/.env.local scripts/rehearsal-set-close.mjs "Kilima Foods (rehearsal)" 3`
- Fill the rest: `node scripts/rehearsal-fill.mjs survey-links.csv https://culture.pac.africa k001@kilima-rehearsal.example,k002@kilima-rehearsal.example,k003@kilima-rehearsal.example`
- Prove the whole of Part A on a throwaway client: `node --env-file=apps/web/.env.local scripts/rehearsal-verify.mjs <project-ref> <token-file> <base-url>`
